DETAILED ACTION

Allowable Subject Matter

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-18 rejected under 35 U.S.C. 103(a) as being unpatentable over Shih (2003/0230748) in view of Ikeda et al. (5,221,631) in view of Peng et al. (2004/0219723).

Regarding Claims 1-18, Shi discloses manufacture of TFT planer display panel and process for manufacturing the same where in 3A-3G, it is disclosed a substrate 300, polysilicon layer 304, lightly doped drain regions 309, gate insulating layer 307, gate buffer layer, dielectric layer 310 arranged over gate insulating film 307, source and drain regions 306. Shi fails to disclose the gate buffer layer between gate and the gate insulating layer and the required source/drain metal layers. However, Ikeda et al. disclose a method of fabricating a thin film transistor having a silicon carbide buffer layer where in Fig. 1, buffer layer 4 is located between gate insulating layer 3 and the gates source/drain labeled as 6, 7 and semiconductor layer 5. Furthermore, Peng et al. disclose a low temperature polysilicon thin film transistor and method of manufacturing the same where in Figs. 1I and 1J source and drain metal configuration are disclosed as

Art Unit: 2826

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required gate buffer configuration and the required source and drain metal configuration in Shih as taught by Ikeda et al. and Peng et al. respectively in order to have low temperature polysilicon thin film transistor with increased performance.
